

FIGHTING AGAINST SKIN CANCER

+ First aid for the skin

UVB radiation →

Sunburn →

Skin cancer

The Sun is not our enemy, it is the source of life to which we have had enough time to accommodate ourselves throughout millenniums. The human organism and soul need sunshine, so it is unnecessary to be afraid of sunrays. However, sunburn can have serious consequences: actinic keratosis and skin cancer.

The cause of skin cancer is the Sun's UVB radiation. UVB radiation is extremely high worldwide! This is dangerous!!

The Global Solar UV Index is a guide having been created by WHO:

- 0-2 weak radiation.
- 3-5 moderate radiation.
- 6-7 strong radiation.
- 8-10 very strong radiation.
- 11 extreme radiation.

Therefore, people with warts have reasons for being afraid from sunbath, since as an effect of UVB radiation, harmless warts can easily turn into morbid tumors. In addition, skin cancer is one of the most dangerous tumors with an extremely high, 80% mortal rate. Within this, women with light and sensitive skin are the most threatened. Furthermore, this deadly disease is able to kill people within 2-3 months.

There is a Hungarian invention made of exclusively natural materials. Not only does it give protection against harmful rays but also helps destroying cancerous cells. This is proved by experiments and exams having been done at the skin-clinics of a Hungarian medical university. The remedy is quickly absorbed by the skin without marks, and can be applied both before and after sunbath. Besides prevention, it is also offered by experts for after-treatments.

THE SOLUTION FOR PREVENTING AND TREATING SKIN CANCER IS THE CLINICALLY TESTED R47-PROTUMOL® CREAM

Protect your mole and skin, and use R47-PROTUMOL® cream for prevention. Prevention is investigation in the future! However, the cream can also treat evolved skin cancer effectively as well!

The R47-PROTUMOL® cream contains only natural plant substances, which have components such as antioxidants, different vitamins, minerals, carbohydrates, proteins, flavonoids, enzymes and organic acids.

The antioxidants protect the organism from the harmful effects of free-radicals, thus slowing down the process of ageing of cells, they block the morbid degeneration of the cells and support the immune system. The cream has no side-effects, and it can be used on the whole surface of the body.

The components of the active agents, exercising mutual effects in a synergic way, exercise a positive physiological effect through the course of the treatment. The result of the synergy of the active agents is such a mechanism of effects as a result of which the R47-PROTUMOL® treatment cream is effective not only on the area to be treated, but in parallel with the treatment, due to the significance of the composition of the ingredients, it also promotes the process of regeneration through roborating the immune system.

Basalioma: Before treatment

4 weeks after treatment

Basalioma: Before treatment

1 week after treatment

Basalioma: Before treatment

4 weeks after treatment

Peter Rozim pharmaceutical researcher and inventor: the test of Szent-Györgyi Albert Clinical Centre showed that the R47-PROTUMOL[®] cream has caused improvement already within 1 week, and after 4 weeks of treatment it stopped the growth of tumor, and decreased the degree of ulceration significantly. The cream is able to do all these without side-effects.

FIGHTING AGAINST BREAST CANCER

+ First aid for the breast

Healthy Breast

Inflammatory Breast Cancer

**THE SOLUTION FOR
PREVENTING AND TREATING
BREAST CANCER IS THE
CLINICALLY TESTED
R47-PROTUMOL[®] CREAM**

Dr Mária PÉCSEK

The observations of Dr Mária PÉCSEK, head surgeon, on the R47-PROTUMOL[®] treatment cream

The R47-PROTUMOL[®] Cream was applied 2-3 times a day regularly, with a control six months later.

The 6-7cm tumour in the breast reduced to 1cm.

The armpit metastasis of the other patients became not to be palpable.

The big breast tumour of the patient, which was reduced to a 1cm size due to the treatment, became removable.

The patient was operated on, and the 1cm size tumour was removed. After the operation histological examination found only 1-2 malignant groups of cells in the mutation.

Among my cases there was an ulcerating metastasis on the neck. Having used two tubes of R47-PROTUMOL[®] Cream the metastasis reduced, ulceration healed. Though the basic disease was not healed, the quality of life of the patient was remarkably bettered, and this could not have been reached by any other means.

In my experience I have not seen such a remission in any of my great number of cases.

I have found a similar, medically approved remission in the case of a 35-year-old patient who had an untended, ulcerating breast tumour. After the persistent use of the R47-PROTUMOL[®] Cream the tumour substantially reduced, ulceration disappeared, and the tumour could be removed.

Benignant, palpable mutations of the breast completely disappear by the use of the R47-PROTUMOL[®] Cream.

Thus this Cream is irreplaceable as a preventive as well, regarding the great number of breast tumours.

PROPHARMATECH® Research and Development Company

Our medical innovations laboratory is engaged in the research and development of skin treatment and medication products.

Our main aim is to develop and put on the market such products in which we use such commonly known and basically harmless natural agents that are registered in the pharmacopeia and have a substantial background in special literature, and can be effectively applied in everyday use.

In each case we reached unique results in solving the given problem by following new ways, doing research in fields still unknown for present science and discovering their potentials.

None of our products is a medicine, so they naturally have no side-effects.
